ESTIMATION AND DETECTION THEORY

HOMEWORK # 3:

Please work out the **ten** (10) problems stated below – HVP refers to the text: H. Vincent Poor, *An Introduction to Signal Detection and Estimation* (Second Edition), Springer Texts in Electrical Engineering Springer, New York (NY), 2010. With this in mind, Exercise **II.2** (HVP) refers to Exercise 2 for Chapter II of HVP. Exercises are located at the end of each chapter.

   Show work and **explain** reasoning.

1. ───

Consider the simple binary hypothesis testing problem

$$
\begin{aligned}
H_1: \quad & Y \sim \mathrm{N}(a, 1) \\
H_0: \quad & Y \sim \mathrm{N}(0, 1)
\end{aligned}
$$

with $a \neq 0$, under the probability of error criterion.

   1.a Compute the Bayes value $V : [0, 1] \to [0, 1] : p \to V(p)$.

   1.b Can you show *directly* that $V : [0, 1] \to [0, 1]$ is a differentiable function? a concave function?

   1.c Find p_{m}.

2. ───

Solve Part (b) of Exercise **II.2** (HVP).

3. ───

Solve Part (b) of Exercise **II.3** (HVP)

4. ───

Solve Part (b) of Exercise **II.4** (HVP)

5. ───

Solve Part (b) of Exercise **II.5** (HVP)

6. ───

Solve Part (b) of Exercise **II.7** (HVP)

7. ───

Solve Part (a) of Exercise **II.9** (HVP)

8. _____

9. _____

10. _____

_____
